

#### Product Description

Models produced on 3D printers may have smooth surfaces but they are not highly polished. By giving them a mirror finish before casting or mold making the end product will require much less finishing. Thus, the manufacturing consistency and surface quality will be greatly improved.

Polish your models in 3 easy steps!

1. Use the **Scotch-Brush** with **Supra Pumice Paste** to remove the fine build lines on the model.
2. The **Duratex White Buff** used with **Supra Polishing Creme** produces a very fine and smooth surface.
3. A soft loose **Muslin Buff** used with **Platinum Pink Compound** leaves a mirror bright finish.

Product	Description	Item#
<b>Scotch-Brush</b>	Wheel Buff & Brush, 3"	114-5199
<b>Loose White</b>	4" x 50 Ply, Thread - 80x80	140-4350
